

A hospital needed a technology transplant. Fortunately, we were on call.

Our medical team installed new lab and radiology information systems, and grafted them to the hospital's current platform.

We integrated new technologies to deliver quality healthcare in a record-setting 55 days' time. Now that's a healthy outcome.

The Challenge

The Government of Malta needed to improve management of healthcare records and integrate all medical equipment at Mater Dei Hospital, the nation's largest healthcare facility. Digital technology had to be seamlessly installed, and lab and radiology operations had to be completely updated. Plus, the aggressive implementation needed to occur as hospital operations migrated from the old site to Mater Dei Hospital.

The Solution

We were selected for the first phase of implementation at Mater Dei Hospital. We fully deployed a laboratory information system (LIS), radiology information system (RIS), and picture archiving and communications system (PACS). We linked these state-of-the-art systems with the hospital's existing patient administration system (PAS). We also partnered with iSoft and GE Healthcare, using their software applications for the new digital systems.

To oversee the operation, we deployed a team of senior-level project managers with deep and broad knowledge of healthcare, including experience with simultaneous management of multiple projects and system implementations. We also established an office in Malta, employing and training local personnel to assist with long-term project management.

The Results

The first system "go-live" was achieved in a record-setting 55 calendar days.

We continue to provide support for the applications, with policies and procedures specific to each. We also designed a training program to train hospital personnel.

The successful project has now extended to four additional hospitals in Malta via remote, real-time viewing of radiology images and results.

"Our partnership with ACS Healthcare Solutions is another important milestone reached by the government in its endeavor to give the Maltese people the best in healthcare. The successes we've already seen as a result of our partnership with ACS HCS prove that we are on track for the further expansion of our healthcare network."

Frank Mifsud,
Permanent Secretary,
Government of Malta – Ministry of Health,
Elderly, and Community Care

Sector: Healthcare Provider

Solution: Integrated Digitized System

Client: The Government of Malta,
Mater Dei Hospital

Challenge: An integrated Health
Information System

Results: Satisfied Maltese government
and constituents

The Bottom Line

With a new national hospital in Malta, government officials were eager to initiate an integrated Health Information System. They needed a partner to implement advanced technologies across the hospital's

operations. Lending our expertise and vision, we built a centralized and integrated health services system in just 55 days – making anytime/anywhere access to health information a reality.
