

# Data Protection Agent (DPA)

Do you have systems around the world?  
 Do you know where they're located?  
 Are your data safe and secure?  
 Are your systems encrypted?  
 If a system is stolen, can you ensure that the perpetrator cannot access the data?

These are questions to ask when looking for a viable data security administration solution. We have an answer for all of those very important questions: the Data Protection Agent (DPA).

This system service is the recommended and preferred method for collecting user and workstation information. It:

- Ensures compliance with corporate security policies on protection of company data
- Collects and reports on critical data to a centralized database
- Allows that database to be viewed over the Web anywhere the world.

## Key DPA Benefits

- Reporting and control over the Web
- Remote destruction of stolen data
- Automation of administrative tasks
- Automation of PGP client installations
- Integration with PGP Whole Disk Encryption
- Complete managed encryption to secure laptops and desktop systems around the world
